

A. Import Price Files

- 1) *ALWAYS* backup your data if you are not sure what will happen when you import
- 2) Go to **File** → **Import** → **Ingredient Prices**

B. Choose a **customer** for ingredients to be updated to or select the **Master File**.

If checked, an imported price of zero will NOT overwrite an ingredient that contains a price

If checked, ALL customers that contain the identical ingredient codes to those in the price file will be updated.

This includes ingredients that are in a mix and synchronized to their respective master ingredient.
